Subject: DragonSkin™ Price Reduction

Dear Valued Customer,

Two years ago, RFS launched DragonSkin, the first UL listed standalone coaxial cable meeting NFPA 72 and 1221 survivability standards without the need to build a fire-resistant enclosure or add metal conduit and extensive wrapping. DragonSkin also meets and exceeds the requirements of NFPA 1225, effective later in 2022, making DragonSkin the ideal solution for all NFPA compliance requirements.

The commercial release was scheduled for March 2020 with a big launch planned at IWCE. However, just before the launch date, the world shut down, with the pandemic altering how we approached bringing this industry first to market. Our internal teams have worked hard over the past 24 months, to educate and inform potential users of the benefits of this new approach; delivering tools and documents via webinars, virtual meetings, and working with AHJs, integrators and other key decision makers in public safety.

Now, we can report that we have achieved key production and sales milestones nearly one year ahead of schedule. To celebrate the success of DragonSkin and make this innovative solution and its safety benefits accessible across more installation sites, **RFS is pleased to announce a list price reduction effective April 1, 2022.**
